FXpansion Geist – What's new in 1.0.3.5

© FXpansion Audio 2011

This document summarizes the new additions and enhancements in Geist v1.0.3.5. All new functions are described in the updated 1.0.3 manual.

- Standalone application now has audio / MIDI preference panels (see manual chapter 13).

- **MIDI pad select** button on main interface to turn on/off MIDI pad selection (see section 1:3).

- **Drag edits** menu for setting other graphs in the same way as velocity (without opening graph lanes) – see section 9:3.

- It is now possible to enable/disable the transmission of notes and MIDI CCs from Geist's MIDI output (see section 12:3).

- Envelope durations are now automatically adjusted when layer samples are played at a different pitch to the original sample (see section 5:8).

- There are now 2 new export functions from the Sampler page – **Send all takes to free layers on current pad** and **Send all takes to free layers on empty pads** (see section 4:2).

- The **Start** and **Stop** parameters for the **Threshold** trigger mode can now be set more intuitively (see section 4:2).
